

INTERVIEW GUIDE

Duration: ~45 minutes

Intro:

- Thank them for their participation and make introductions.
- Explain what the study is about and state the aim of the interview.
- Reminders of recording and transcription, data anonymisation, withdrawal, and the time it will take.
- Inform that it is a semi-structured interview.
- Ask if they have questions before starting.

Questions:

What is productivity for you?

Do you assess productivity? Why? If you do, for what purposes?

- If they assess productivity
- Why they assess productivity
- For what purposes is productivity assessed
- Who uses this data

Does your team know they are being assessed and how? Do you believe that influences their behaviour? (goodhart)

- If they have feedback from developers about how they perceive the metrics/productivity

At which level and how do you assess productivity?

Is there a difference for you between individual and team productivity?

- What influences each?
- How each is measured (metrics)
 - How does that metric work for you
 - Doesn't that lead to X to you?
 - What metrics are you satisfied/ not satisfied with
- What they are used for...
- Conflict between them

What aspects of your current approach to assessing productivity work well for you?

- In what situations do you find productivity assessment/metrics particularly useful or reliable?
- Do these differ when looking at individual vs. team productivity?

Are there any shortcomings or limitations in how you currently assess productivity?

- Are there situations where productivity metrics are less useful or misleading?
- Do these limitations differ when looking at individual vs. team productivity?

What practices or strategies do you use to deal with these limitations?

Are there any practices you consider “good practices” when assessing productivity?

Does developer experience play a role in how you think about productivity?

- How is developer experience incorporated into your current approach to measuring or discussing productivity?
- Do you also try to collect data about developer experience?
- How is developer experience connected to productivity?

Something that you feel you forgot to mention that may be relevant?
